Hey AJ,
I was looking over the 810 and the following needs tweaking.

- Under PS 233337 there are 3 points:

1. N1 for the street address is pulling in additional line of info (ATTN line or other) but not the next street address. See below screen shot for examples
2. Need to have BY (buying party) which invoicing program should pulls the type 1 from CUSTADRS or the 850/860 customer values. (currently hardcoded in program but this matches type 1)
3. Also need to have the Lockbox address which the only place this is stored is on the BILLTO file under customer 6630 see screen shots below.

```

- Looking over invoice 23328401
  1. This one has FOB, ITD and the previous invoice 233337 check did not have these values. I thought we were sending everything.
  2. ITA rls number used – hardcorded in program but can this be added to file?

- Missing invoices for Dodge mechanical/baldor Electric - ps 233221 but the invoices are split out by part number so there is 01,02,03 ending.
  In ecsval 149 and 150 are two branches of the company and this might need that special 810 by array info
  NOTE this is hardcoded in the program that Array numbers that fall under 1205 go under ECSVAL = 149

```
                              DATA BASE UTILITY (DBU)

```

- Looking at invoice 15222001 ps 152220
  - CUR segment has SE not BY (previously checked are BY code) or is this in a file?
  - IT1 separated out (multiple lines) by container but not listed (aka serial number) why is this different? Than previously checked CAT

- Reviewing Invoice 23293901
  - IT1 missing dunnage costs.
  - Looks like this one the surcharge is supposed to be rolled into pricing.

Gonna review INVOIC next.
